

WHAT IS CLAIMED IS:

1. An integrated device for testing tone quality of a plurality of microphones, said device comprising:

A main body; and

5 A control panel mounted on said main body and provided with a plurality of receiving holes for receiving a plurality of microphones, said control panel further provided with a plurality of switches corresponding in location to said receiving holes.

10 2. The integrated device as defined in claim 1, wherein said control panel is provided with a plurality of light-emitting diode (LED) indicator lamps corresponding in location to said receiving holes and said switches.

15 3. The integrated device as defined in claim 1, wherein said switches are of a keyboard construction.

4. The integrated device as defended in claim 1, wherein said main body is provided with a plurality of racks for holding a plurality of earphones for use in evaluating the tone output of a microphone under test.
